

The children in 6th class have been very busy since they returned to school. We have been working hard on our recount writing, learning how to play percussion instruments and samba rhythms and getting to grips with our Gaeilge grammar.

It was maths week this week and our class took part in an indoor and outdoor maths trail. We had lots of fun trying to measure the area of our new play area, tallying the vehicles that passed our school and solving problems relating to our environment.

We have been learning all about the structure of the human skeleton and the proper scientific names for many of the bones in the human body. In order to distinguish our tibias from our fibulas and our patellae from our phalanges, we have been constructing skeletons in art and are looking forward to displaying them in time for Halloween!
